

# Advanced biocomposites for the BIO-GNET economy of tomorrow

Contact person: prof. Izabela Nowak

The aim of this project (carried out in a consortium of 6 universities) was the biosynthesis and characterization of the properties of new materials based on biosilica doped with transition metal ions.

The effects of the project are:

- 12 papers published in scientific journals
- 3 national patent applications
- 2 European patent applications
- 1 European patent (September 2024)
